SoftCap® A – SpO_2 Sensors

Autoclavable for the highest hygiene requirements

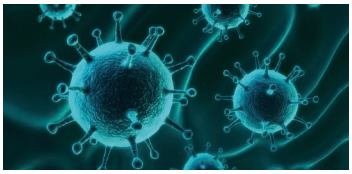
» PRODUCTS that care for you «

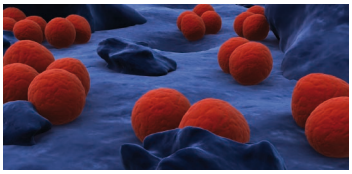
Rubber boot®

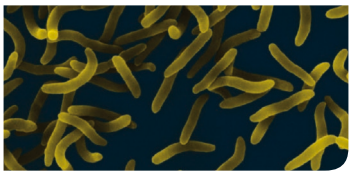
SAPPHIRE® TECHNOLOGY

Made in Germany

Sterilisable and robust







With the SoftCap® A sensors, it is possible for the first time to autoclave SpO_2 sensors at 134°C and thereby effectively sterilise them. Therefore, the risk of a possible nosocomial infection resulting from pathogenic microorganisms or multi-resistant germs, remaining on the surface of the sensor is reduced.

Due to its robust design, the SoftCap®A sensor is well suited for use in the tough environment of rescue services, emergency care and hospital facilities.

PATIENT COMFORT

- Structured design elements for an ergonomic fit
- Compared to conventional finger clip sensor technology does not adversely affect perfusion.
- Bio-compatible and latex free silicone housing helps to prevent allergic skin reactions.
- Reduced pressure load on the finger enables longer repositioning intervals.

FLEXIBLE AND ROBUST

- Elastic and flexible sensor head
- Sensor head resists highest mechanical stress in comparison to conventional finger clip sensors.

RELIABLE

- The construction and design minimise both motion and ambient light interferences.
- In cases of low perfusion, the innovative thermo-Q opto-sets of ***bluepoint®*** MEDICAL, with thermo-balanced light radiation characteristics, result in a significantly improved signal-to-noise ratio.

Typical applications

- Clinical operations , as intensive care
- Rescue services and emergency medicine
- Long-term monitoring

The clinically tested and validated oximetry sensors from ***bluepoint®*** MEDICAL are fully compatible replacement sensors intended for use with most brands of pulse oximeters and modules.
